TWIN-PATH®.... The Most Inspectable Slings

There are two kinds of tell-tail indicators—one to warn of overload and a fiber optic to warn of core fiber damage.

New ✓Fast™ inspection with External Warning Indicator is an option that reacts to multiple conditions that can affect a synthetic sling.

The separate inner cover shows red for warning that the sling is damaged and should be taken out of service.

Twin-Path® slings are repaired with patches like this. Each sling is proof tested after a repair.
